

ValueMetrics Supply Chain Health Check

Our Supply Chain Health Check affords companies an invaluable opportunity to determine how well their supply chain operations are performing. Without the correct performance measurement tools and techniques it is difficult to effectively measure how well your supply chain is performing.

With increasing pressure to justify and maximise the value of your assets and drive improved performance, businesses today need to identify areas for cost reduction and performance optimisation within the supply chain operation. ValueMetrics Supply Chain Health Check offers companies the opportunity to:

- Qualitatively and quantitatively determine the performance of your supply chain operations
- Identify where the areas of improvement exist
- Understand what the expected payback of implementing the recommendations would be
- Provide you with an understanding of how to implement those recommendations

ValueMetrics Supply Chain Health Check provides you with transparency of your current supply chain, whether that would be a departmental view or a view of the business operations as a whole, ultimately allowing you to develop long term sustainable improvements within your supply chain.

We can focus on the specific needs of your company and can carry out health checks on the following:

- Lean Manufacturing
- Production Planning
- Inventory Management
- Raw Materials Procurement
- Finished Goods Procurement
- Warehouse Management
- Demand Planning

How the Supply Chain Health Check works

- We **IDENTIFY** the quality of your existing processes, support functions and tools
- We **EXTRACT** data from your system which is imported into our modelling engine
- We **ANALYSE** the performance of key processes employed within your supply chain
- We **EXPLORE** the issues identified within the supply chain
- We **DEVELOP** a clear summary of results clarifying potential opportunities and improvements within your supply chain

Get results with the Supply Chain Health Check

A ValueMetrics Health Check is a comprehensive study of your working practices, and through a balanced mix of interviews with key personnel, performance analysis of the key processes employed, customers can expect outputs and recommendations including but not limited to the following:

- Completed best practice questionnaire documents
- Simulation of your inventory supply chain using your data

- Quantified business benefits for identified improvements
- Identification of the strengths and weaknesses in current business processes
- Prioritised suggestion of areas for business process improvements
- Disconnections with the business processes and their resolution
- Mapping onto SAP Supply chain functionality or any other ERP system and proposed route map for implementation
- Identification of missing data, data anomalies and general IT issues
- Summary showing ROI, costs and a suggested project plan
